

ABSTRACT OF THE DISCLOSURE

**EXCLUDING UNWANTED PAGES IN A PRINTING SYSTEM JOB**

A method operative to automatically exclude unwanted or wasteful portions of a printing system job includes 5 steps for, describing an unwanted portion of the job, and locating instances of the described portion within the job. For example, blank pages are located within a copy job and removed from an output stream, thereby conserving material, time, and reducing equipment wear. A printing system, such 10 as, for example, an electronic document processor, fax machine or copier, operative to perform the method, includes a pattern detector and a portion deleter. The pattern detector searches input data for portions matching an unwanted portion description. When appropriate, the 15 portion deleter removes unwanted portions from the input data.
